

Mail 2 – Inventory Movement & Stock analytics

Average Stock Movement =
`AVERAGE('public vw_inventory_movement_summary'[total_quantity])`

Inventory Turnover Ratio =
`AVERAGE('public vw_inventory_kpi_summary'[inventory_turnover])`

Monthly Stock Flow =
`SUM('public vw_inventory_movement_summary'[total_quantity])`

Reporting Insights :

The **Inventory Movement & Performance Dashboard** provides a complete and interactive view of inventory movement across warehouses, categories, and

movement types. The dashboard combines key performance indicators such as movement value, movement quantity, inventory turnover, stock flow, warehouse performance, and inventory health into a single report.

All visuals are interconnected using **cross-filtering**. When users select a warehouse, category, or movement type, the entire dashboard updates automatically. This enables users to instantly analyze movement trends, compare warehouse performance, identify slow-moving or overstock inventory, and evaluate inventory turnover without creating separate reports.

The dashboard also helps users monitor monthly inventory movement, track stock flow, analyze movement patterns, and identify categories or warehouses that require operational attention. This interactive reporting makes inventory analysis faster, more accurate, and supports data-driven business decisions.
