Executive Dashboard Insights :

The Executive Supply Chain Dashboard provides a centralized view of overall supply chain performance, helping management monitor inventory, warehouse operations, and supplier efficiency from a single screen. It highlights top-

performing warehouses, identifies high-value inventory categories, and enables comparison of warehouse performance across different locations.

The dashboard helps executives quickly identify operational risks such as inventory discrepancies, validation issues, stock shortages, overstock situations, and slow-moving inventory. It also supports supplier performance evaluation and warehouse benchmarking, making it easier to prioritize areas that require immediate attention.

By combining inventory health, operational efficiency, and risk indicators into one dashboard, it enables faster decision-making, improves resource allocation, strengthens inventory control, and supports strategic planning for a more efficient and reliable supply chain.
